Bontouch partners in long term collaborations with clients who are serious about mobile challenges.

2013 we revolutionized mobile banking for businesses, got our first international clients in China and the US, moved into new HQ on Drottninggatan in Stockholm and grew to 21 employees! In 2012 we went to Cuba, launched Eurocard iOS/Android as well as the ingenious app Link, a groundbreaking app to share your notes on patented Swedish innovation Whitelines® Paper. We won the Golden Mobile award with our client SEB in 2011 and for Best Utility App with our client Rebtel in 2010.

A lot in a few years, but we have only just started!

New Dynamic Interfaces
#UX #Wireframes #AppDesign

Both iOS and Android have shifted focus in UX design towards a strong “feeling” rather than the looks. Basically the GUI becomes cleaner while the components you interact with behave more as physical objects with for example weight. Transitions and animations get a more important role, how can you describe this in a wireframe?

The goal is to give the content all the attention. In this thesis you will research the latest trends, and then you will improve the UX of an existing app to a modern dynamic user interface. The goal is to create an interaction design that feels great while not getting in the way of getting things done.
