

Front-end Lead

About the Company

Yepstr brings back the “neighborhood kid”, connecting households and young entrepreneurs for routine tasks. Through an innovative and educational marketplace we will help reduce youth unemployment and create the next generation of entrepreneurs. If you are passionate about actually having an impact and improving the world we live in – then this is the ship you need to board.

Although we were just recently founded we have very strong supporters such as one of Sweden's 10 richest people, one of the founders of one of the largest asset management companies in the world and one of the first 10 people at Spotify.

Assignment

In this assignment you will be a critical part of the development team, and work closely with the design team to create beautiful UI using web technologies (React) and optimizing for iOS and Android. If you love creating visually appealing, dynamic and modern user interfaces that make the user's palms sweat, and gives them rosy cheeks... then this could very well be the perfect role for you.

Education / Skills

We believe that you are a dependable developer who prefers a high working tempo, variation and learning from other exceptionally driven people. We think you enjoy working in tightly-knit, agile teams with very fast iteration- cycles.

You probably enjoy the thought of being a part of something from the beginning - really being able to have an impact in important decisions.

It is expected that you are experienced in different web technologies and can choose the right tool, programming language or library required by the situation. You know how to make a "correct" solution, but can also pull together a quick-n-dirty version when that's required.

"Must-have" skills:

- Reactjs or other front-end javascript frameworks
- javascript (predominantly ES6)
- Responsive, dynamic design
- HTML5, CSS3
- Experience from agile and test-driven teams
- Eye for design, a track record of creating beautiful user experiences

"Nice-to-have" skills:

- Design-experience, either through working closely with a design team or through own designs
- "Mobile first" mindset
- Startup experience
- Leading a team of developers
- Node.js
- Scaling software, safely, to hundreds of thousands of users
- App- development for iOS/Android (mainly React Native or cordova)
- Using sockets for realtime communication
