Peter Eklund and Richard Cole:

A Knowledge Representation for Information Filtering Using Formal Concept Analysis

Authors' affiliations: Griffith University, Gold Coast MC, Australia

Abstract: *This paper is a description of a technique to allow the manipulation of conceptual scales by domain experts through interaction and manipulation of a folding Hasse diagram. By providing a set of manipulations, the domain expert, with only an intuitive understanding of the underlying representational theory – formal concept analysis – is able to construct scales to investigate text data. The method shows how a knowledge representation language, and its diagrammatic rendering, can be used to navigate a document collection.*

Publication and review history

1. *Received* by the research area "Concept Based Knowledge Representation" of the Electronic Transactions on Artificial Intelligence, posted on its web site, and advertised in its Newsletter on 10.3.2000.
2. Available for *discussion* in the ETAI area of Concept Based Knowledge Representation until June, 2000. The discussion protocol is available and will be retained in the Article Interaction Page at
   http://www.etaij.org/ra/cbkr/006/
3. First version conditionally *accepted* after due refereeing and according to scientific journal standards by the Electronic Transactions on Artificial Intelligence (ETAI) on 10.8.2000.
4. Revised version *accepted* on 3.1.2001.
5. Revised version appears in Electronic Transactions on Artificial Intelligence, Volume 4 (2000), pages 51–61. The section and the annual volume are made permanently available at
   http://www.ep.liu.se/ej/etai/2000/
6. Paper editions of the ETAI issue and the ETAI volume containing this artice *republished* by the Royal Swedish Academy of Sciences.
7. First and final versions are also *published* as individual articles by Linköping University Electronic Press in December 2000 and January 2001, and are permanently available at
   http://www.ep.liu.se/ea/cis/2000/005/

The review policy and the quality requirements for acceptance are documented at http://www.etaij.org/info/

Article maintenance

The Electronic Transactions on Artificial Intelligence maintains an Article Interaction Page for this article at
http://www.etaij.org/ra/cbkr/006/
Besides the publication and review history, it contains links for contacting the author(s), as well as to amendments and other related information for the article. It is intended to keep these links up-to-date in the future.

Copyright conditions

For all versions of the article mentioned above, the copyright belongs to the author. The publishing agreements specify that it is permitted for anyone to download the article from the net, to print out single copies of it, and to use classroom sets of copies for academic purposes. Please refer to the article URL:s for additional conditions.
