IDA is the Swedish abbreviation for the Department of Computer and Information Science, at Linköping University, Sweden. IDA was founded in 1983, but the roots go back to the early seventies. It is one of the largest departments for computer and information science in northern Europe, with 190 employees of which 68 are faculty members (PhDs), including 26 full professors. Approximately 60 postgraduate students are enrolled in the department's PhD programmes, including two thirds doctoral students holding salaried positions.

Research at IDA covers a broad spectrum of topics from core computer science to applications, including theoretical computer science, programming environments, software engineering, real-time and embedded systems, artificial intelligence, information security, databases, information systems, computational linguistics, cognitive science, interaction and service design, autonomous systems and statistics.

IDA offers around 15-20 PhD courses every year, and our broad research base directly enriches our undergraduate and graduate education. We give courses within most engineering programmes, several Master programmes, as well as the programmes for innovative programming, cognitive science and statistics.

IDA is organized into five divisions, each with responsibility for both research and teaching. They include:

- **ADIT**: Database and Information Techniques, Prof. Nahid Shahmehri, nahid.shahmehri@liu.se.
- **AIICS**: Artificial Intelligence and Integrated Computer Systems, Prof. Patrick Doherty, patrick.doherty@liu.se.
- **HCS**: Human-Centered Systems, Prof. Arne Jönsson, arne.jonsson@liu.se.
- **STIMA**: Division of Statistics and Machine Learning, Prof. Mattias Villani, mattias.villani@liu.se.
- **SaS**: Software and Systems, Prof. Christoph Kessler, christoph.kessler@liu.se.

**Contact**

For general information about the department, see the department home page at

http://www.ida.liu.se/

For specific information about PhD studies and the various PhD subjects, content of PhD courses, etc., please contact the

**Director of Graduate Studies**
Prof. Petru Eles, petru.eles@liu.se

For general information about applications to PhD studies, financial support, working and residence permits and other administrative questions, please contact

**Coordinator of Graduate Studies Administration**
Anne Moe, anne.moe@liu.se

For information about our international master’s programs please consult our web

https://www.liu.se/en/education

Frequently Asked Questions

Q: What do PhD students do?
A: PhD students are usually involved in two main activities: the writing of a PhD thesis, and taking PhD courses. Writing a PhD thesis usually implies taking part in research projects conducted by one of our research groups.

Q: How long does it take to finish a PhD?
A: Each of the activities above amounts to approximately four years of full-time work, but since most PhD students are also involved in up to 20 per cent teaching the total expected time to obtain a PhD is five years.

Q: What do IDA PhDs do after graduation?
A: There are a great variety of careers available to graduates. Some of our PhDs have become lecturers and professors at IDA; others secure positions with other universities in Sweden and abroad, for instance at MIT and Yale. Approximately half of our PhDs are now working in industry, in Sweden and abroad.

Q: What is a licentiate degree?
A: The licentiate degree is a degree half-way between a master’s degree and a PhD. It amounts to one year of PhD courses, and one year of thesis work (excluding teaching). Most people who complete the PhD degree first complete the licentiate degree and then spend two more years on PhD courses and thesis work.

Q: How do I identify the subject of my thesis?
A: The subject of your thesis is typically decided jointly by yourself and your supervisor. All PhD students have one main supervisor and one second supervisor. In addition many PhD students also have an advisory committee consisting of the main supervisor and several additional supervisors.

Q: How do I finance my studies?
A: There is no tuition fee. In fact, almost every PhD student in the department is employed as a “doctorand” and has a salary. A doctorand position is typically renewed one year at a time, and is limited to a maximum of 4 years (excluding teaching).

Q: What are the requirements for becoming a PhD student?
A: Every PhD student admitted to a subject area and each subject area has its own requirements. In order to be eligible you should have at least the equivalent of a Bachelor’s degree plus an additional year’s specialization in the subject area (Master’s degree) or 240 ECTS with 60 ECTS at advanced level.

Q: Where can I get information about courses?
A: More information can be found on our homepage.

Q: What about other benefits?
A: Most PhD students have an office and a small lab. PhD students also have social benefits of other employees: pension, social security etc.

Q: What do IDA PhD students do after graduation?
A: There are a great variety of careers available to graduates. Some of our PhDs have become lecturers and professors at IDA; others secure positions with other universities in Sweden and abroad, for instance at MIT and Yale. Approximately half of our PhDs are now working in industry, in Sweden and abroad.

Q: Are there any admission tests?
A: No, there are no admission tests but you have to satisfy the requirements described above, and there is a general examination including an interview.

Q: What research areas are covered by IDA?
A: Research at IDA covers a broad spectrum of topics from core computer science applications, including theoretical computer science, programming environments, software engineering, real-time and embedded systems, artificial intelligence, information security, databases, information systems, computational linguistics, cognitive science, interaction and service design, autonomous systems and statistics.

Q: How much teaching does a PhD student do?
A: Everyone who has a full-time doctorand position should devote at least 30 per cent of their time to PhD courses and thesis work. Hence up to 20 per cent can be devoted to teaching.

Q: What is a licentiate degree?
A: The licentiate degree is a degree half-way between a master’s degree and a PhD. It amounts to one year of PhD courses, and one year of thesis work (excluding teaching).
