

# IoT – Logistics

Storage control – easy and reliable

1 september 2022

# IoT - Logistics

- Project partners
  - Region Östergötland
  - Kinda kommun
  - Linköpings kommun
  - RISE (Research Institute of Sweden)
  - Linköping Science park
- Financiers (50%)
  - Strategic innovation programme
    - **Vinnova**
    - Formas
    - Energimyndigheten

Med stöd från:

Strategiska  
innovations-  
program

# Purpose

- Contribute to good technical support for public organizations' logistics chains through real-time control of current inventory balances at the end user storages.
- Test and evaluate IoT technologies to support inventory management and formulate the experiences into the technical part of a procurement document and a guidance how to implement.

# Background

Pick and go

Lack of control...

- We know...
  - what we have purchased
  - what we have in central storage, 40-50%
- We do not know...
  - when an item is used
  - what is the current balance
  - where we can find a missing item

... imagine the uncertainty in 200 minor storage areas

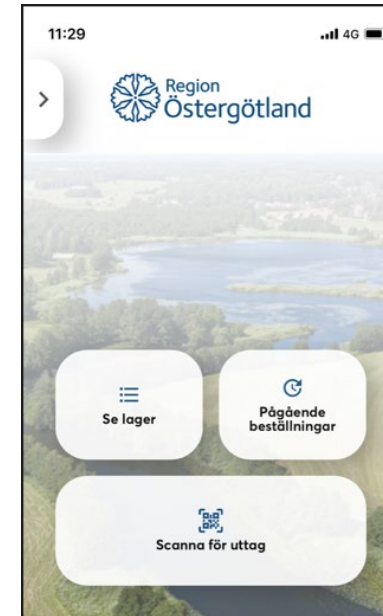

New rules for civil defense, three month of independence

# Objectives

- Present one or more IoT solutions that measure the real consumption within the region and municipality in real time.
- Simple solutions with the least possible interaction, very easy to use
- Development of functional requirements as a basis for various solutions to measure consumption in real time. Part of procurement material.
- Explore the possibility of a cohesive logistics process for common items between region and municipality.

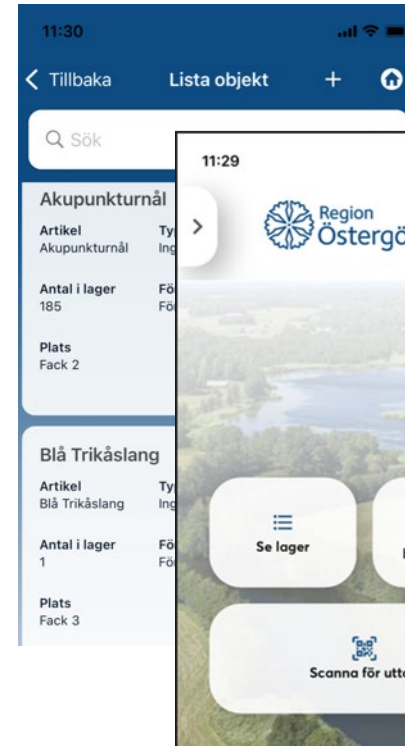

# Proof of Concept

- Control
- Ease of use
- Real staff testing
  
- Testing technology, not the actual system
  
- Three concepts choosen
  - QR-codes and cell phones
  - Load cells
  - AI with camera

# QR-codes

- Pros
  - No new equipment (shelves, wardrobes)
  - Easy scanners
  - Easy to use?
  - Proven technology
  - Provides documented control if used
  - Cheap per unit and per transaction
- Cons
  - Not so easy to use?
  - Only one hand to work with
  - Extra work for the staff
  - Need marking on shelves with QR code

# Shelf scales

- Pros
  - No (or very little) interaction with technology
  - Detection on misplaced items
  - Similar to actual work methods, "just pick n' go"
  - Two hands available
  - Always correct balance, even if mistakes in check-in and check-out
- Cons
  - Expensive, needs new infrastructure and inventory.
  - Takes more space for shelves. May need remodeling.

# AI camera solution

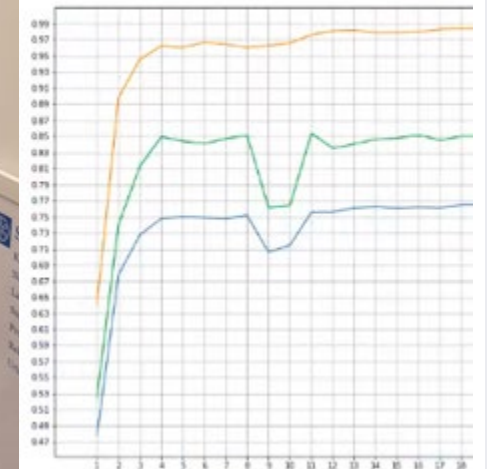

- Next to be tested, in parallel with student activities
- Selected six types of articles
- Comparing amount before and after, presenting difference
  - Optimal?
  - Unsolved problems
    - How to train new articles?
    - How many articles can be handled in a system?
    - Sensitive to changes in the environment, lights etc.

# Results, so far...

- SUS, System usability Scale
- Proven method
- Digital Equipment Corporation (DEC), 1986

	Strongly disagree				Strongly agree
1. I think that I would like to use this system frequently	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
2. I found the system unnecessarily complex	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
3. I thought the system was easy to use	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
4. I think that I would need the support of a technical person to be able to use this system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
5. I found the various functions in this system were well integrated	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
6. I thought there was too much inconsistency in this system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
7. I would imagine that most people would learn to use this system very quickly	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
8. I found the system very cumbersome to use	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
9. I felt very confident using the system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5
10. I needed to learn a lot of things before I could get going with this system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5

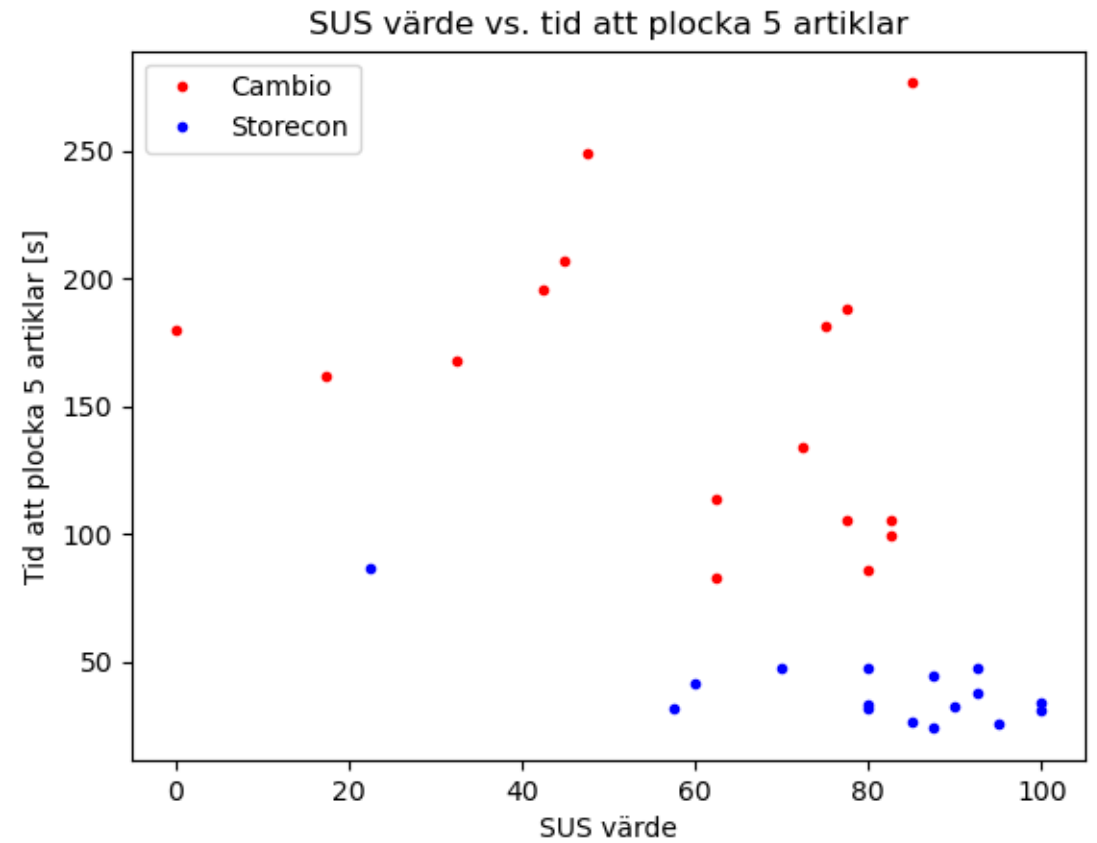

# Results, so far...

- Method
  - Simple calculation formula, add and multiply
- Result value indicates usability

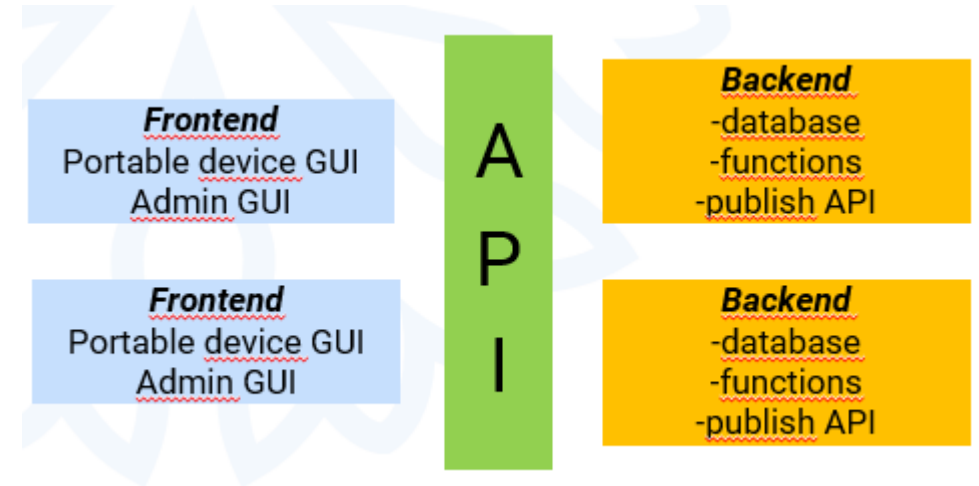

# Results, so far...

- Correlation SUS value and time in "pick-5-items" test

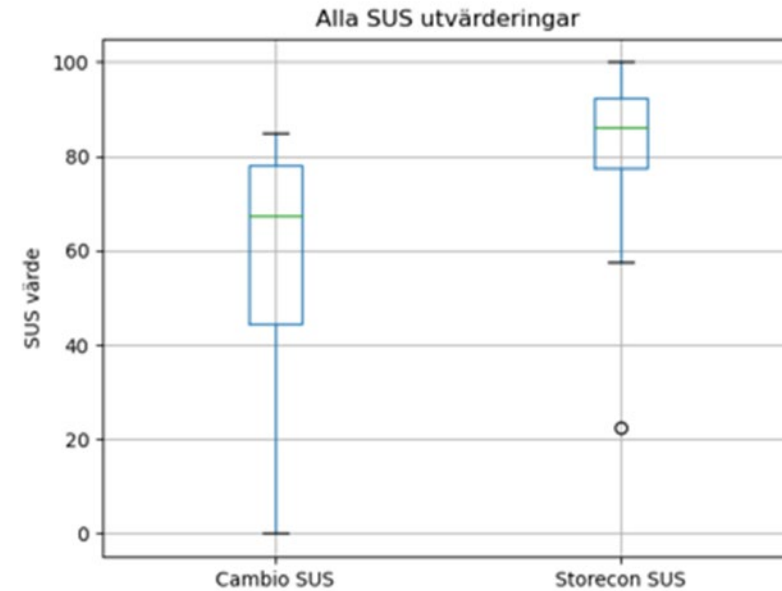

# Your mission

- Develop frontend; Mobile application (web based)
  - Develop frontend; Admin GUI (web based)
  - API
  - Develop backend with some business logics
- 
- 2 groups will be responsible for the backend product and publishing the API
  - 2 groups will be responsible for the front end products
  - ALL groups will in cooperation define the API, API definition must be maintained

# Evaluation

- Your output will be tested in the same way as the PoC with a SUS evaluation. With staff from the hospital. You will compete against Cambio.
- Both frontend groups will be tested against both backend groups
- We evaluate you as a group from a customer perspective on how you perform the task as a group and how you interact with the customer, and that we evaluate the product you leave behind.
- Remember, you are potentially helping us solve a real problem in the public sector, your contribution is valuable.

# Questions?

- Good luck!
