

TAILOR

WP 4 - Paradigms & Representations

Luc De Raedt

KU LEUVEN

LEUVEN.AI INSTITUTE

WP 4

Different AI paradigms and representational paradigms

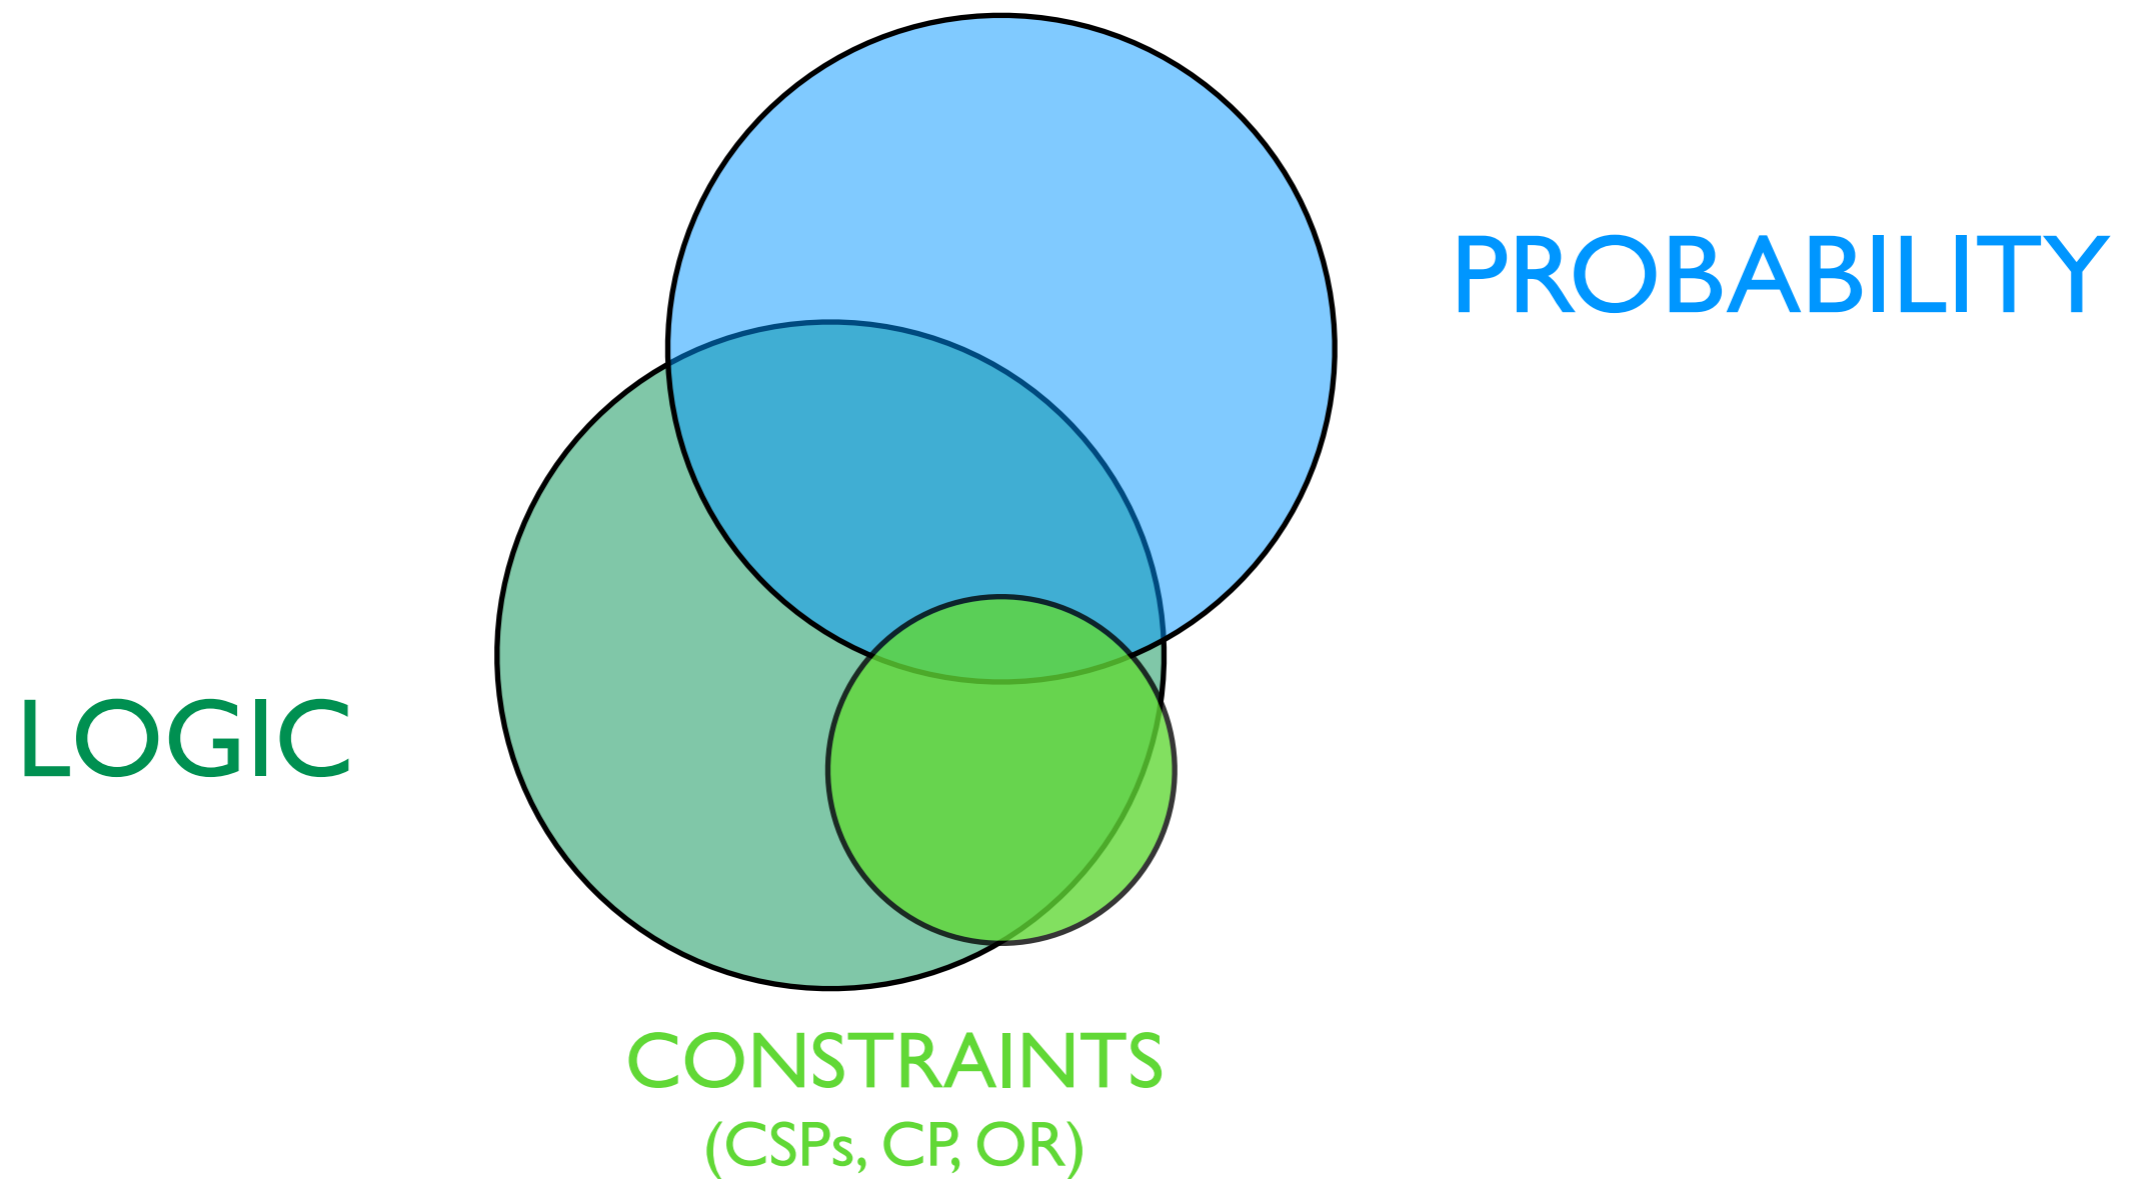

- Goals :
 - integrate these paradigms
 - integrate the involved communities
- Focus is on the **static** case, i.e., no time, no action, no dynamics, just like in a database
- Covers five core different communities including
 - Deep & Probabilistic Learning
 - Neuro-Symbolic Computation (NeSy)
 - Statistical Relational AI (StarAI)
 - Constraint Programming & Machine Learning
 - Knowledge graphs for reasoning
 - And apply ... in e.g. computer vision

Reasoning

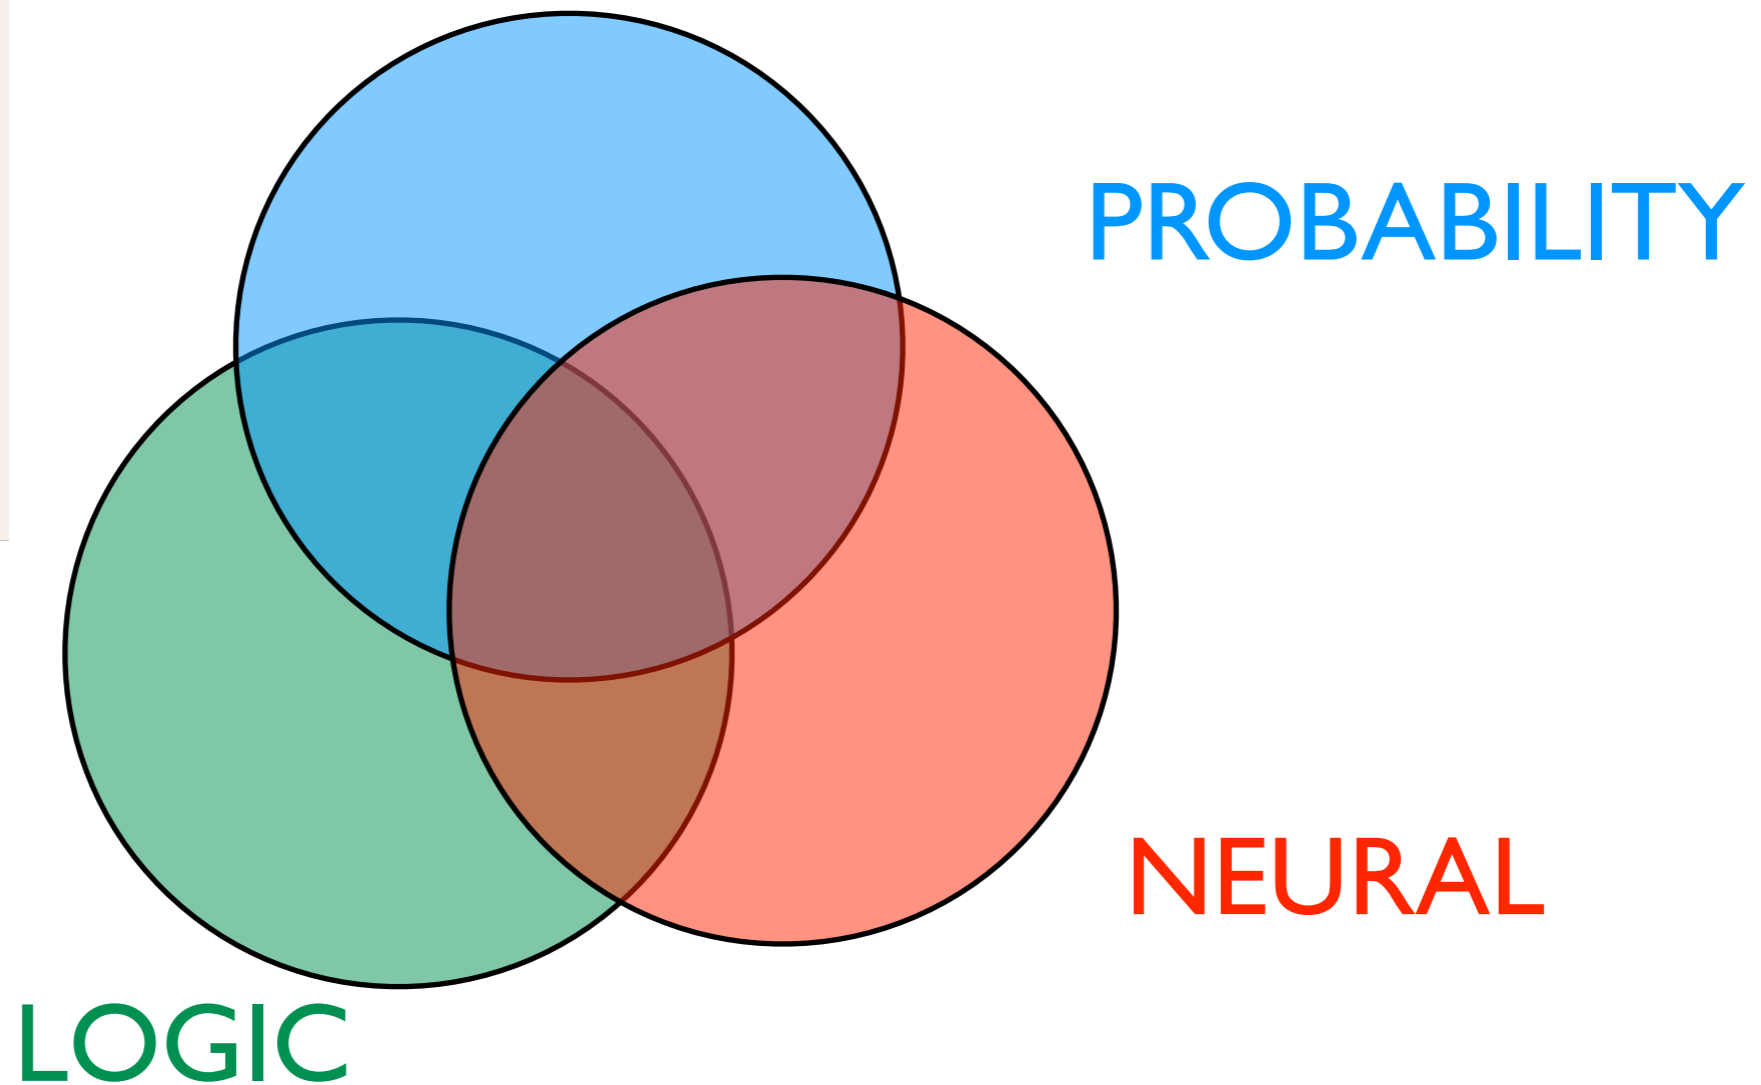

Generally accepted as the
TWO MAIN PARADIGMS FOR REASONING

Reasoning

Generally accepted as the
TWO MAIN PARADIGMS FOR REASONING

Learning

THREE DIFFERENT PARADIGMS FOR LEARNING
(there are two more – evolutionary and analogical,
not tied to particular representations)

Community 1

NEURAL

A lot of Deep

Learning

Community 1

A lot of **Deep (Probabilistic) Learning**

THE POINT IS – A LOT OF ML FITS HERE

Community 2

Neuro Symbolic Computation

Community 3

Knowledge graphs and ontologies

Community 4

**Statistical Relational AI (StarAI)
and Probabilistic Programming**

Community 5

PROBABILITY

NEURAL

CONSTRAINTS
(CSPs, CP, OR)

Constraint Programming & Machine Learning
e.g. Empirical Model Building (Milano @ IJCAI 19)

WP 4

Different Tasks

- Task 4.1: Integrated representations for learning and reasoning
- Task 4.2 Integrated approaches to learning and optimisation
- Task 4.3 Learning and reasoning with embeddings, knowledge graphs, & ontologies
- Task 4.4: Learning and reasoning for perception, spatial reasoning, and vision

Integrate
